

ALL THINGS AEROFLOW SLEEP NEWSLETTER

Enter To Win An Air Purifier

Last year, researchers discovered that "the use of added high-efficiency particulate air (HEPA) filters has been recommended in certain situations to protect [CPAP] users from several causes...including COVID-19."

That's why Aeroflow Sleep has decided to give an air purifier to one lucky sleep apnea patient!

To enter to win, all you have to do is fill out our online qualify form. Not only will you be eligible* for this exclusive prize, our team will check to see if you're also eligible for new CPAP supplies through insurance.

So, what are you waiting for?

Click on the button below to submit your entry:

CURRENT PROJECTS: A WEBINAR FOR HEALTH PLANS

Do you work for a Health Plan that wants to provide the best care to its members? If so, don't hit snooze on this webinar—September 20th, when we will discuss the challenges that Health Plans face when managing sleep apnea.

We'll also talk about possible solutions to consider in a post-COVID era. After all, clinical setups look very different today than they did in 2020; who knew telehealth would stick around?!

Speakers on the panel include our very own, Dr. Carleara Weiss and one friendly, familiar face of parent company, Aeroflow Healthcare: Chief Medical Officer, Dr. Mike Cantor.

Click below to save the date and explore what your role is in closing the healthcare gap, especially where our online PAP patients are concerned...

NOW SHOWING

HOW TO ASSEMBLE YOUR CPAP MASK

Using the Fisher & Paykel Vitera Full-Face CPAP Mask as an example, Aeroflow Sleep now has a quick tutorial on TikTok, explaining how to assemble your CPAP mask parts; including headgear, mask frame, and mask cushion.

IN THE KNOW WITH AEROFLOW

3 AIR LEAK PREVENTION TIPS

Today's PAP machines have alerts that will tell you if you have an air leak, but really you want to avoid that from happening altogether, right?

#1: Ensure Your Mask Is Assembled Properly

The first thing you want to do to avoid leaks is make sure the fit is right, which is why Aeroflow Sleep created that easy-to-follow TikTok.

Looking for a more detailed video that's specific to your CPAP mask? Michelle Worley, Registered Nurse and our Director of Clinical Operations, has an entire YouTube playlist about how to use your CPAP supplies; including 7 masks.

[WATCH PLAYLIST](#)

#2: Check The Connected Parts

See if you feel air blowing near or around the tube where it connects at either end of the mask and machine. Tighten that connection up; same goes for the humidifier, if it's not fully pushed into the machine.

If you notice any cracks in the tubing or water chamber, do NOT try to patch them.

#3: Ask Yourself When You Last Replaced Your CPAP Supplies

Why shouldn't you patch cracks? Well, that's a sign the supplies need to go!

Every CPAP user is entitled to replacement parts, and most are covered up to 100% through insurance. Follow your insurance plan's regular replacement schedule before a leak happens or a repair is needed, so you won't go a single night without this life-saving therapy.

HOW DO I KNOW IF MY CPAP SUPPLIES ARE DUE TO BE REPLACED?

That's easy! Just call your dedicated Aeroflow Sleep Specialist. We'll let you know exactly which parts are covered when and ship them right to your front door.
